

Accessing SC VPN - Cisco AnyConnect (Windows)

To access the VPN using the Cisco AnyConnect VPN Client for Windows:

If you already have the AnyConnect VPN Client installed, skip to step 3.

1. Navigate to VPN.sckans.edu and login with your SC credentials (firstname.lastname & password).
2. The site should then run an auto-installer and install the VPN client on your computer. If the auto-installer fails to install the client, you should be presented with a link to manually download the VPN client. Download and run the installer via this link. Once the installer has completed, proceed to step 3.
3. Launch the AnyConnect VPN Client from Start > All Programs > Cisco > AnyConnect VPN Client
4. Enter VPN.sckans.edu into the connection field and press "Connect."
5. Enter your SC credentials into the corresponding fields (firstname.lastname, password) and hit "OK." The window should minimize into the taskbar if a successful connection is made.

Congratulations! You are now connected to the VPN and should have access to campus network resources.

Need Further Assistance?

If you need further assistance, please contact the SC Helpdesk at sc.helpdesk@sckans.edu or by phone at (620) 229-6444. We are open Monday - Friday, 8am - 5pm CST.

Thank you!
